

PITO physicians can now access their EMR securely from within a hospital over the e-Health Network Gateway

The eHealth Network Gateway (eNG) is now successfully connected to the PPN and in addition, a number of the PITO Qualified EMR vendors are also now connected to the eNG. Therefore, depending on the readiness of the physician's EMR vendor; physicians now have the ability to connect to their EMR application from within the various Health Authorities' facilities across the province without the use of the PPN token. If a physician has the need to access his/her EMR application from within one of the Health Authorities' facilities using the eNG please contact your EMR vendor's helpdesk to inquire if this solution is available, and if it is available, request the EMR vendor specific directions to connect via the eNG.

Special Reminder: Physicians still require PPN tokens to connect to their EMR applications remotely (e.g. from their home, hotel room, etc...)
